

SPACE SAVINGS: THE NEXT GENERATION LIQUID EGG TOTE

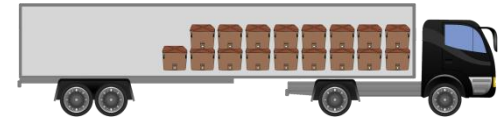

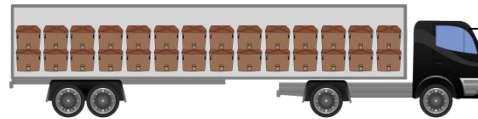

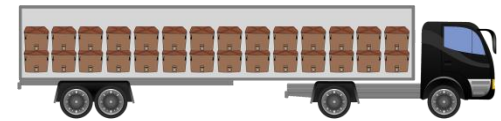

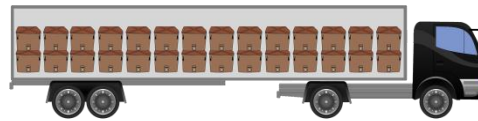

The CHEP Pallecon-315 collapses to offer greater efficiencies in transportation and storage
 Transporting the same capacity in Rigid Plastic Totes could require more than 3 times the freight for reverse logistics, increasing costs and environmentally harmful emissions

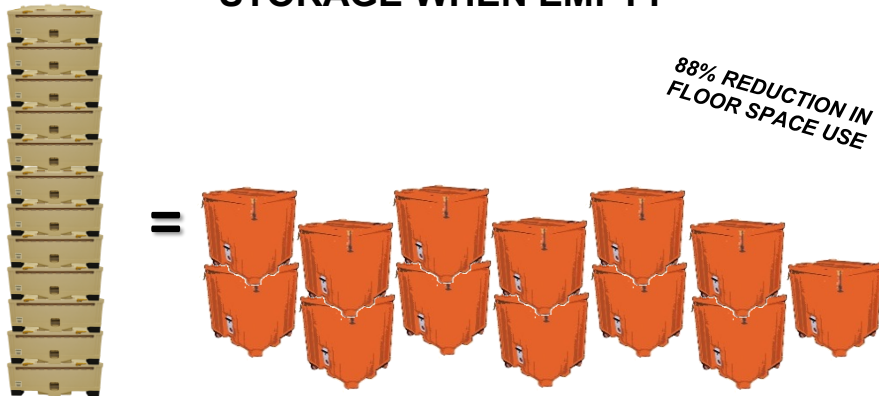

TRANSPORTATION EFFICIENCIES

1 truckload of collapsed CHEP Pallecon-315s
 =
 3.6 truckloads of non-collapsible totes

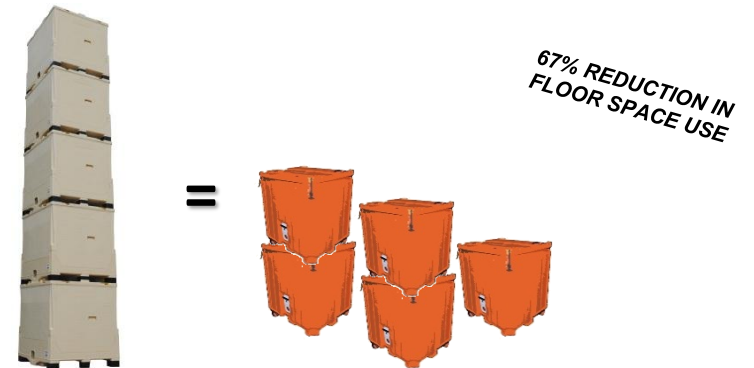

STORAGE WHEN EMPTY

Similar rigid totes can only stack 2 high. The CHEP Pallecon-315 collapses and stacks up to 12 high when empty, saving valuable warehouse floorspace.

STORAGE WHEN FULL

CHEP Pallecon-315s can stack 5 high when full without the need for racking systems, significantly reducing floor space needed in storage.
